Professional Summary

Computer Science (Honours) graduate with hands-on project experience building full-stack applications, REST APIs, database-backed systems, and cloud-integrated solutions using **React, TypeScript, Java, Spring Boot, Python, PostgreSQL, Docker, and AWS**. Familiar with AI-assisted development using **Claude Code** for code generation, debugging, and testing. Eager to contribute, learn from experienced developers, and grow through feedback and hands-on experience.

Education

University of Manitoba — Winnipeg, MB
Bachelor of Computer Science (Honours), Dean's Honour List (2021) — *Sep. 2021 – Jun. 2026*

Skills

Languages: Java, TypeScript, JavaScript, Python, SQL
Developer Tools: Git, GitHub, Docker, AWS (S3, Elastic Beanstalk, RDS), Azure (basic), CI/CD, Excel, WordPress
Libraries / Frameworks: React, Angular, Spring Boot, Node.js, Express, Prisma, JUnit, Vitest, Cypress, Playwright
Networking / Security: REST APIs, WebSockets, Redis, PostgreSQL, MongoDB, JWT, Amazon Cognito, authentication, API integration

Projects

Ride-Sharing Platform | *Java, Spring Boot, React, TypeScript, PostgreSQL, AWS* — Demo | Jun. 2026

- Built a full-stack ride-sharing platform spanning **4 core domains** (riders, drivers, vehicles, trips) with Spring Boot, React, TypeScript, PostgreSQL, and REST APIs.
- Integrated **4 external services** (Amazon Cognito, AWS S3, Google Maps/Places, NHTSA vPIC) for authentication, file storage, location search, and vehicle data.
- Enabled real-time driver-location tracking with WebSockets and Redis, keeping transient location state separate from persistent data.

AI Document Processing & Business Automation | *Python, FastAPI, PostgreSQL, Docker* — GitHub | Sep. 2026

- Built a **6-stage** document-processing workflow that turns synthetic invoices into structured records through ingestion, extraction, LLM classification, validation, persistence, and business-rule processing.
- Developed **6+ authenticated REST endpoints** for document upload, processing status, review decisions, retries, and audit-history retrieval, with SQLAlchemy and Alembic managing workflow data.
- Implemented **10+ deterministic validation checks** (required fields, arithmetic totals, purchase-order matching, duplicate detection, idempotency), routing exceptions to manual review.
- Used AI-assisted development to generate, debug, and refine code, reviewing changes against requirements and testing the full workflow.

Experience

DNOJ Accounting and Tax
Web Developer / Data Assistant — *May 2025 – Sep. 2025*

- Improved WordPress SEO for an accounting and tax firm by connecting Google Search Console, comparing SEO tools on features and cost, and configuring Rank Math.
- Contributed to a **10%** increase in website traffic by restructuring page headers and above-the-fold content around researched search terms.

Canada Revenue Agency
Tax Processing Assistant, T1 Matching Assessor — *May 2022 – Dec. 2022*

- Processed **1,000+ tax cases** accurately and confidentially by validating taxpayer documentation against processing requirements.
- Resolved missing or inconsistent information by investigating documentation and financial discrepancies and following up with clients.
- Met deadlines in a high-volume queue by prioritizing work and documenting the decision on each case.
